Floating, Flowing, Flying

*Pieter J. Zandbergen's Life as Innovator,
Inspirator and Instigator in Numerical
Fluid Dynamics*

edited by

D. Dijkstra, B.J. Geurts, J.G.M. Kuerten
and H.K. Kuiken

*Faculty of Mathematical Sciences, University of Twente,
Enschede, The Netherlands*

TABLE OF CONTENTS

Dedication	1–2
C. H. Driesen, J. G. M. Kuerten and M. Streng: Low-Reynolds-number flow over partially covered cavities	3–20
P. Wesseling, A. Segal, C. G. M. Kassels and H. Bijl: Computing flows on general two-dimensional nonsmooth staggered grids	21–44
L. Van Wijngaarden: On the sound radiated by a turbulent bubbly flow	45–55
Kris Rienslagh, Jan Vierendeels and Erik Dick: Two-dimensional incompressible Navier-Stokes calculations in complex-shaped moving domains	57–73
A. I. M. Denneman, R. J. J. Jongschaap and J. Mellema: Rheological modeling with Hookean bead-spring cubes (SC, BCC and FCC)	75–95
Bernhard Müller: Low-Mach-number asymptotics of the Navier-Stokes equations	97–109
Vassilios Theofilis: On the resolution of critical flow regions in inviscid linear and nonlinear instability calculations	111–129
N. Riley: Unsteady fully-developed flow in a curved pipe	131–141
H. Schippers: Boundary-integral-equation methods for screen problems in acoustic and electromagnetic aerospace research	143–162
R. W. C. P. Verstappen and A. E. P. Veldman: Spectro-consistent discretization of Navier-Stokes: a challenge to RANS and LES	163–179
H. K. Kuiken: A free-convection boundary-layer model for the centrifugal etching of an axisymmetric cavity	181–200
I. Moise, E. Simonnet, R. Temam and M. Ziane: Numerical simulation of differential systems displaying rapidly oscillating solutions	201–214
E. Van Groesen: Wave groups in uni-directional surface-wave models	215–226
M. Markiewicz and O. Mahrenholtz: Progressive cross waves due to the horizontal oscillations of a vertical cylinder in water. Evolution equations	227–247
