Focus
Cartography is the art, science and technology of making and using maps.
Cartographic method for users to get insight into and overview of spatio-temporal data (projection, scale, generalization, symbolization, …)

Human need & demand for informed decision making
Yesterday: map as artifact
Today: map as a service

cadastre
traffic
view
Tomorrow: map as embodied experience
Today and tomorrow….

- We should realize that under all circumstances the cartographic workflow is a chain of many decisions which have far wider implications than realized

- Be aware on what and how to map
  
  **Educate map makers**

- Be aware of what to see in maps
  
  **Train map users**
Let’s make the world a better place with maps
