Preface

Rotating Machinery, Optical Methods & Scanning LDV Methods represents one of the eight volumes of technical papers presented at the 37th IMAC, A Conference and Exposition on Structural Dynamics, organized by the Society for Experimental Mechanics, and held in Orlando, Florida, January 28–31, 2019. The full proceedings also include volumes on Nonlinear Structures and Systems; Dynamics of Civil Structures; Model Validation and Uncertainty Quantification; Dynamics of Coupled Structures; Special Topics in Structural Dynamics & Experimental Techniques; Sensors and Instrumentation, Aircraft/Aerospace, Energy Harvesting & Dynamic Environments Testing; and Topics in Modal Analysis & Testing.

Each collection presents early findings from experimental and computational investigations on an important area within structural dynamics.

The organizers would like to thank the authors, presenters, session organizers, and session chairs for their participation in this track.
