# **New Directions in Nonlinear Observer Design**

Springer

## Series Advisory Board

A. Bensoussan · M.J. Grimble · P. Kokotovic · H. Kwakernaak  
J.L. Massey · Y.Z. Tsyppkin

## Editors

H. Nijmeijer

Faculty of Mathematical Sciences, University of Twente, PO Box 217,  
7500 AE Enschede, The Netherlands

T.I. Fossen

Department of Engineering Cybernetics, Norwegian University of Science and  
Technology, N-7034 Trondheim, Norway

ISBN 1-85233-134-8 Springer-Verlag London Berlin Heidelberg

British Library Cataloguing in Publication Data

New directions in nonlinear observer design. – (Lecture

notes in control and information sciences ; 224)

1.Observers (Control theory) 2.Nonlinear control theory

3.Feedback control systems

I.Nijmeijer, Henk, 1955- II.Fossen, Thor I.

629.8'36

ISBN 1852331348

Library of Congress Cataloging-in-Publication Data

New directions in nonlinear observer design / H. Nijmeijer and

T.I. Fossen (eds.).

p. cm. – (Lecture notes in control and information sciences

; 244)

Includes bibliographical references and index.

ISBN 1-85233-134-8 (alk. Paper)

1.Observers (Control theory)--Congresses. 2. Nonlinear control

Theory--Congresses. I. Nijmeijer, H. (Henk), 1955- .

II. Fossen, Thor I. III. Series.

QA402.3.N487 1999

99-12174

629.8'312--dc21

69/3830-543210 Printed on acid-free paper

## Acknowledgments

The editors are grateful to:

- **Strategic University Program (SUP) in Marine Cybernetics** at the Norwegian University of Science and Technology (NTNU), Departments of Engineering Cybernetics, Marine Hydrodynamics and Marine Structures (*Professor Dr.-Ing. Olav Egeland, Program Manager*).
- **ABB** (*Professor Dr.-Ing. Asgeir J. Sørensen, Technology Manager - Business Area Marine and Turbochargers*)

for their financial support.

The authors want to thank all the workshop contributors for contributing to this book project.

Finally, Mrs. Alison Jackson at Springer-Verlag London should be thanked for editorial suggestions and for helping us with general publishing questions.

Trondheim, February 1999  
Enschede, February 1999

Thor I. Fossen  
Henk Nijmeijer

<b>I</b>	<b>Nonlinear Observer Design</b>	<b>1</b>
<b>1</b>	<b>A Viewpoint on Observability and Observer Design for Nonlinear Systems</b>	<b>3</b>
	<i>G. Besançon</i>	
1	Introduction . . . . .	3
2	Basic Definitions and Proposed "Classification" . . . . .	4
3	Examples of Non Uniform and Uniform Observation . . . . .	7
3.1	Non Uniform Observation: the Case of State-Affine Systems . . . . .	7
3.2	Uniform Observation: the Case of Uniformly Observable Systems . . . . .	8
3.3	An Example of Uniform Observation of Non-uniformly observable Systems . . . . .	9
4	Observer Interconnection . . . . .	11
5	State Transformations and Observer Design . . . . .	15
6	Conclusions . . . . .	20
7	References . . . . .	20
<b>2</b>	<b>Model-Based Observers for Tire/Road Contact Friction Prediction</b>	<b>23</b>
	<i>C. Canudas de Wit, R. Horowitz and P. Tsiotras</i>	
1	Introduction . . . . .	23
2	Tire-road Friction Models . . . . .	25
2.1	Pseudo-Steady State Models . . . . .	26
2.2	Lumped Dynamic Models . . . . .	28
2.3	Distributed Dynamic Models . . . . .	29
2.4	Relation Between Distributed Dynamical Model and the Magic Formula . . . . .	30
3	Problem Formulation . . . . .	32
4	General Observer Design . . . . .	33
5	Application to the One-Wheel Model . . . . .	36
5.1	Simulation Results . . . . .	39
6	Conclusions . . . . .	40
7	References . . . . .	41

<b>3</b>	<b>Observer Design for Nonlinear Oscillatory Systems</b>	<b>43</b>
	<i>D. Kristiansen and O. Egeland</i>	
1	Introduction . . . . .	43
2	Contraction Theory . . . . .	44
3	System Equations . . . . .	46
	3.1 Analysis . . . . .	47
4	Observer Design . . . . .	49
5	Simulations . . . . .	51
	5.1 Example 1: 2-DOF Oscillatory System with Cubic Nonlinearities . . . . .	51
	5.2 Example 2: Cylinder Gyroscope . . . . .	52
6	Conclusions . . . . .	56
7	References . . . . .	57
<b>4</b>	<b>Transformation to State Affine System and Observer Design</b>	<b>59</b>
	<i>A. Glumineau and V. López-M.</i>	
1	Introduction . . . . .	59
2	Definitions and Notation . . . . .	60
3	Problem Statement . . . . .	61
	3.1 The Input-Output Differential Equation for State Affine Systems $\sum_a$ . . . . .	61
	3.2 State Affine Transformation Algorithm . . . . .	62
4	Synthesis Observer for State Affine Systems . . . . .	65
	4.1 Physical Example . . . . .	66
	4.2 Simulation Results . . . . .	67
5	Conclusions . . . . .	68
6	References . . . . .	69
<b>5</b>	<b>On Existence of Extended Observers for Nonlinear Discrete- Time Systems</b>	<b>73</b>
	<i>H. J. C. Huijberts</i>	
1	Introduction . . . . .	73
2	Differential Forms . . . . .	75
3	Observer Design using Observer Forms . . . . .	79
4	Observer Design using Extended Observer Forms . . . . .	84
5	Conclusions . . . . .	90
6	References . . . . .	91
<b>6</b>	<b>Stability Analysis and Observer Design for Nonlinear Diffusion Processes</b>	<b>93</b>
	<i>W. Lohmüller and J.-J. E. Slotine</i>	
1	Introduction . . . . .	93
2	Contraction Analysis . . . . .	94
	2.1 Basic Tools . . . . .	94

2.2	Nonlinear Observer Design using Contraction Theory	96
2.3	Weakly Contracting Systems . . . . .	97
3	Nonlinear Diffusion Equations . . . . .	99
3.1	Contraction Properties of Reaction-Diffusion Processes . . . . .	100
3.2	Observer Design for Nonlinear Diffusion Processes . . . . .	103
4	Spatial Discretization and Numerical Implementation . . . . .	104
5	Further Extensions . . . . .	105
6	References . . . . .	109
A	Computation of Contraction Rates . . . . .	109
<b>7</b>	<b>Nonlinear Passive Observer Design for Ships with Adaptive Wave Filtering</b>	<b>113</b>
	<i>J. P. Strand and T. I. Fossen</i>	
1	Introduction . . . . .	113
2	Modeling . . . . .	115
2.1	Kinematics . . . . .	115
2.2	Vessel Dynamics . . . . .	115
2.3	Total Ship Model . . . . .	118
3	Non-Adaptive Observers . . . . .	118
3.1	Observer in the EF frame . . . . .	119
3.2	Augmented Observer . . . . .	123
4	Adaptive Observer . . . . .	125
4.1	Adaptive Observer Equations . . . . .	126
4.2	Adaptive Observer Error Dynamics . . . . .	126
4.3	Stability and Passivity . . . . .	126
5	Experimental Results . . . . .	128
6	Conclusions . . . . .	130
7	References . . . . .	133
<b>8</b>	<b>Nonlinear Observer Design for Integration of DGPS and INS</b>	<b>135</b>
	<i>B. Vik, A. Shiriaev and T. I. Fossen</i>	
1	Introduction . . . . .	135
1.1	Nomenclature . . . . .	135
1.2	Motivation . . . . .	136
2	Review of GPS Fundamentals . . . . .	138
3	Strapdown Equations . . . . .	140
3.1	Local Frame Representation . . . . .	140
3.2	Earth Frame Representation . . . . .	141
3.3	Angular Velocity Equations . . . . .	142
4	Nonlinear Observer Design . . . . .	142
4.1	Angular Velocity Observer . . . . .	143
4.2	Velocity and Position Observers . . . . .	145
5	Case Study . . . . .	157

6	Conclusions and Future Work . . . . .	158
7	References . . . . .	158
<b>9</b>	<b>Variants of Nonlinear Normal Form Observer Design</b>	<b>161</b>
	<i>J. Schaffner and M. Zeitz</i>	
1	Introduction . . . . .	161
2	Normal Form Observer . . . . .	162
3	Continuous Observer . . . . .	163
4	Extended Luenberger Observer . . . . .	167
5	Block-Triangular Observer . . . . .	171
6	Conclusions . . . . .	179
7	References . . . . .	179
<b>II</b>	<b>Output Feedback Control Design</b>	<b>181</b>
<b>1</b>	<b>Separation Results for Semiglobal Stabilization of Nonlinear Systems via Measurement Feedback</b>	<b>183</b>
	<i>S. Battilotti</i>	
1	Introduction . . . . .	183
2	Notations . . . . .	185
3	Regional Stabilization via Measurement Feedback . . . . .	186
	3.1 Tools . . . . .	186
	3.2 Applications . . . . .	191
	3.3 Semiglobal Stabilization of Uncertain Nonlinear Sys- tems . . . . .	196
4	References . . . . .	205
<b>2</b>	<b>Observer-Controller Design for Global Tracking of Nonholonomic Systems</b>	<b>207</b>
	<i>Z.-P. Jiang and H. Nijmeijer</i>	
1	Introduction . . . . .	207
2	Problem Statement . . . . .	208
3	Reduced-Order Observer . . . . .	210
4	Output-Feedback Design . . . . .	212
	4.1 Backstepping-Based Trackers . . . . .	213
	4.2 A Modification . . . . .	217
5	Example: A Knife-Edge . . . . .	219
6	Conclusions and Future Work . . . . .	225
7	References . . . . .	226
<b>3</b>	<b>A Separation Principle for a Class of Euler-Lagrange Systems</b>	<b>229</b>
	<i>A. Loría and E. Panteley</i>	
1	Introduction . . . . .	229

<b>IV</b>	<b>Synchronization and Observers</b>	<b>467</b>
<b>1</b>	<b>Synchronization Through Extended Kalman Filtering</b>	<b>469</b>
	<i>C. Cruz and H. Nijmeijer</i>	
1	Introduction . . . . .	469
2	An Extended Kalman Filter as Receiver . . . . .	472
3	Examples . . . . .	479
	3.1 Synchronization . . . . .	479
	3.2 Secure Communication . . . . .	483
4	Concluding Remarks . . . . .	487
5	References . . . . .	488
<b>2</b>	<b>Nonlinear Discrete-Time Observers for Synchronization Problems</b>	<b>491</b>
	<i>T. Lilge</i>	
1	Introduction . . . . .	491
2	State Equivalence to a System in Extended Observer Form . . . . .	494
3	Observer Design via Extended Observer Form . . . . .	497
4	Alternative Observer Structures via EOF . . . . .	499
	4.1 Observer Equations . . . . .	499
	4.2 Main Characteristics of the Observers . . . . .	500
5	An Example in the Field of Communication . . . . .	501
6	Observer Design for the Rössler System . . . . .	503
	6.1 Observer Design in Continuous-Time . . . . .	505
	6.2 Observer Design in Discrete-Time . . . . .	506
	6.3 Observer Errors for Slow Error Dynamics . . . . .	506
	6.4 Observer Errors for Fast Error Dynamics . . . . .	507
	6.5 Concluding Remarks . . . . .	508
7	Discussion and Conclusions . . . . .	509
8	References . . . . .	509
<b>3</b>	<b>Chaos Synchronization</b>	<b>511</b>
	<i>U. Parlitz, L. Junge and L. Kocarev</i>	
1	Introduction . . . . .	511
2	Synchronization of Spatially Extended Systems . . . . .	512
3	Generalized Synchronization . . . . .	515
4	Phase Synchronization . . . . .	518
5	Conclusions . . . . .	522
6	References . . . . .	522

2	Model and Problem Formulation . . . . .	232
3	A Cascades Approach to a Separation Principle . . . . .	234
3.1	Observer Design . . . . .	235
3.2	State Feedback Controller . . . . .	236
3.3	A Separation Principle . . . . .	237
4	Application to Robot Manipulators . . . . .	240
5	Conclusions . . . . .	243
6	References . . . . .	244
A	A Theorem on UGAS for Strictly Passive Systems . . . . .	246

## 2 Nonlinear Observer for Signal and Parameter Fault Detection in Ship Propulsion Control 375

*M. Blanke and R. Izadi-Zamanabadi*

1	Introduction . . . . .	375
2	Ship Propulsion System . . . . .	376
	2.1 Propeller Thrust and Torque . . . . .	377
	2.2 Diesel Engine Prime Mover . . . . .	377
	2.3 Hull Resistance . . . . .	378
	2.4 Actuators for Fuel Injection and Propeller Pitch . . . . .	378
	2.5 Sensors . . . . .	378
3	Control Hierarchy . . . . .	379
4	Structural Analysis . . . . .	380
	4.1 Description of the Model . . . . .	380
	4.2 Formal Representation . . . . .	380
	4.3 Sensor Fusion for Re-configuration . . . . .	381
5	Isolation of Shaft Speed and Engine Faults . . . . .	384
	5.1 Adaptive Observer . . . . .	384
	5.2 Identification of Propeller Parameters . . . . .	386
	5.3 Identifiability from Usual Maneuvering Data . . . . .	388
6	Fault Isolation . . . . .	389
	6.1 Re-configuration . . . . .	392
7	Simulation Results . . . . .	394
8	Conclusions . . . . .	395
9	References . . . . .	395

## 3 Nonlinear Observers for Fault Detection and Isolation 399

*P. M. Frank, G. Schreier and E. Alcorta García*

1	Introduction . . . . .	399
2	Preliminaries . . . . .	400
3	Observer-Based Residual Generation . . . . .	401
	3.1 Nonlinear Identity Observer Approach . . . . .	401
	3.2 Nonlinear Unknown Input Observer Approach . . . . .	403
	3.3 The Disturbance Decoupling Nonlinear Observer Approach . . . . .	404
	3.4 Adaptive Nonlinear Observer Approach . . . . .	406
	3.5 The Nonlinear Fault Detection Filter Approach . . . . .	408
	3.6 Observer for Fault Diagnosis in Bilinear Systems . . . . .	410
4	Nonlinear Observer Design via Lipschitz Condition . . . . .	412
	4.1 Observer Presentation . . . . .	412
	4.2 Contribution of this Observer . . . . .	415
	4.3 Residual Generation . . . . .	417
5	Conclusions . . . . .	418
6	References . . . . .	418

<b>4</b>	<b>Application of Nonlinear Observers to Fault Detection and Isolation</b>	<b>423</b>
	<i>H. Hammouri, M. Kinnaert and E.H. El Yaagoubi</i>	
1	Introduction . . . . .	423
2	Residual Generation for Linear Systems . . . . .	424
	2.1 Problem Statement . . . . .	424
	2.2 Second Problem Formulation . . . . .	425
	2.3 Principle of the Solution . . . . .	426
3	Residual Generation for Nonlinear Systems . . . . .	428
	3.1 Introduction . . . . .	428
	3.2 Basic Notions . . . . .	428
	3.3 High Gain Observers for Uniformly Observable Systems . . . . .	429
	3.4 The Fundamental Problem of Residual Generation for Nonlinear Systems . . . . .	431
	3.5 Application of Nonlinear Observers to the FPRG . . . . .	434
4	Hydraulic System . . . . .	437
	4.1 Modelling of the System . . . . .	437
	4.2 Design of a Residual Generator . . . . .	438
5	Conclusions . . . . .	441
6	References . . . . .	441
A	Numerical Values used for the Simulation of the Hydraulic System . . . . .	443
<b>5</b>	<b>Innovation Generation for Bilinear Systems with Unknown Inputs</b>	<b>445</b>

1	Introduction . . . . .	445
2	Problem Statement . . . . .	447
3	Design Procedure . . . . .	448
4	Innovation Monitoring . . . . .	456
	4.1 Introductory Remark . . . . .	456
	4.2 Innovation in the Presence of Additive Faults . . . . .	456
	4.3 Generalized Likelihood Ratio Test . . . . .	457
5	Design and Validation of a FDI System for a three Tank Process . . . . .	459
	5.1 Process Description . . . . .	459
	5.2 Design and Validation of the Innovation Generator . . . . .	460
	5.3 Evaluation of the Innovation Sequence . . . . .	462
6	Conclusions . . . . .	463
