HCI is a multidisciplinary field focused on human aspects of the development of computer technology. As computer-based technology becomes increasingly pervasive – not just in developed countries, but worldwide – the need to take a human-centered approach in the design and development of this technology becomes ever more important. For roughly 30 years now, researchers and practitioners in computational and behavioral sciences have worked to identify theory and practice that influences the direction of these technologies, and this diverse work makes up the field of human-computer interaction. Broadly speaking it includes the study of what technology might be able to do for people and how people might interact with the technology. The HCI series publishes books that advance the science and technology of developing systems which are both effective and satisfying for people in a wide variety of contexts. Titles focus on theoretical perspectives (such as formal approaches drawn from a variety of behavioral sciences), practical approaches (such as the techniques for effectively integrating user needs in system development), and social issues (such as the determinants of utility, usability and acceptability).

Titles published within the Human–Computer Interaction Series are included in Thomson Reuters' Book Citation Index, The DBLP Computer Science Bibliography and The HCI Bibliography.

Contents

1 Entertaining the Whole World 1
Adrian David Cheok, Teresa Romão, Anton Nijholt and Gino Yu

2 The Kathmandu Kids Entertainment Workshops 5
Yoram I. Chisik, Alissa N. Antle, Brian Birtles,
Elena Márquez Segura and Cristina Sylla

3 Digital Pop Kids 23
Ichiya Nakamura

4 Fostering Learning and Behavior Change Through Computer Entertainment 41
Teresa Romão

5 Yellow is Mine!: Designing Interactive Playgrounds Based on Traditional Childrens Play 63
Daniel Tetteroo, Dennis Reidsma, Betsy van Dijk and Anton Nijholt

6 Embedded Smarthouse Bathroom Entertainment Systems for Improving Quality of Life 85
Shigeyuki Hirai

7 Social Presence and Artificial Opponents 115
André Pereira, Rui Prada and Ana Paiva

8 Observations on Tinkering in Scientific Education 137
Maarten H. Lamers, Peter van der Putten and Fons J. Verbeek

Appendix Enhancing Learning Experience Through Robotics in Nepal 147

Contributors

Alissa N. Antle School of Interactive Art & Technology, Simon Fraser University, Surrey, Canada

Brian Birtles Mozilla Japan, Tokyo, Japan

Adrian David Cheok Mixed Reality Lab, City University, London, UK

Yoram I. Chisik University of Madeira Funchal, Portugal
