# Preface

*This book is dedicated to:*

Luigi Maria Ricciardi

*for his 360-degree open mind. We will miss his guidance now and forever*

and to:

*what has never been, what was possible, and what could have been*

*though we never know what it was.*

This volume brings together the advanced research results obtained by the European COST Action 2102 “Cross Modal Analysis of Verbal and Nonverbal Communication,” primarily discussed at the PINK SSPnet-COST 2102 International Conference on “*Analysis of Verbal and Nonverbal Communication and Enactment: The Processing Issues*” held in Budapest, Hungary, September 7–10, 2010 (<http://berber.tmit.bme.hu/cost2102/>).

The conference was jointly sponsored by COST (European Cooperation in Science and Technology, [www.cost.eu](http://www.cost.eu)) in the domain of Information and Communication Technologies (ICT) for disseminating the advances of the research activities developed within the COST Action 2102: “Cross-Modal Analysis of Verbal and Nonverbal Communication” ([cost2102.cs.stir.ac.uk](http://cost2102.cs.stir.ac.uk)) and by the European Network of Excellence on Social Signal Processing, SSPnet (<http://sspnet.eu/>).

The main focus of the conference was on methods to combine and build up knowledge through verbal and nonverbal signals enacted in an environment and in a context. In previous meetings, COST 2102 focused on the importance of uncovering and exploiting the wealth of information conveyed by multimodal signals. The next steps have been to analyze actions performed in response to multimodal signals and to study how these actions are organized in a realistic and socially believable context. The focus was on processing issues, since the new approach is computationally complex and the amount of data to be treated may be considered algorithmically infeasible. Therefore, data processing for gainin-genactive knowledge must account for natural and intuitive approaches, based more on heuristics and experiences rather than on symbols, as well as on the discovery of new processing possibilities that account for new approaches for data analysis, coordination of the data flow through synchronization and temporal organization and optimization of the extracted features.

The conference had a special session for COST 2102 students. The idea was to select original contributions from early-stage researchers. To this aim all the papers accepted in this volume were peer reviewed.

This conference also aimed at underlining the role that women have had in ICT and—to this end—the conference was named “First SSPnet-COST2102 PINK International Conference.” The International Steering Committee was composed of only women.

The themes of the volume cover topics on verbal and nonverbal information in body-to-body communication, cross-modal analysis of speech, gestures, gaze and facial expressions, socio-cultural differences and personal traits, multimodal algorithms and procedures for the automatic recognition of emotions, faces, facial expressions, and gestures, audio and video features for implementing intelligent avatars and interactive dialogue systems, virtual communicative agents and interactive dialogue systems.

The book is arranged into two scientific sections according to a rough thematic classification, even though both sections are closely connected and both provide fundamental insights for cross-fertilization of different disciplines.

The first section, “Multimodal Signals: Analysis, Processing and Computational Issues,” deals with conjectural and processing issues of defining models, algorithms, and heuristic strategies for data analysis, coordination of the data flow and optimal encoding of multi-channel verbal and nonverbal features.

The second section, “Verbal and Nonverbal Social Signals,” presents original studies that provide theoretical and practical solutions to the modelling of timing synchronization between linguistic and paralinguistic expressions, actions, body movements, activities in human interaction and on their assistance for effective human–machine interactions.

The papers included in this book benefited from the live interactions among the many participants of the successful meeting in Budapest. Over 90 senior and junior researchers gathered for the event.

The editors would like to thank the Management Board of the SSPnet and the ESF COST- ICT Programme for the support in the realization of the conference and the publication of this volume. Acknowledgements go in particular to the COST Science Officers Matteo Razzanelli, Aranzazu Sanchez, Jamsheed Shorish, and the COST 2102 reporter Guntar Balodis for their constant help, guidance, and encouragement. The event owes its success to more individuals than can be named, but notably the members of the local Steering Committee Klára Vicsi, György Szaszák, and Dávid Sztahó, who actively operated for the success of the event. Special appreciation goes to the president of the International Institute for Advanced Scientific Studies (IIASS), Gaetano Scarpetta and to the Dean and the Director of the Faculty and the Department of Psychology at the Second University of Naples, Alida Labella and Giovanna Nigro, for

making available people and resources for the editing of this volume. The editors are deeply indebted to the contributors for making this book a scientifically stimulating compilation of new and original ideas and to the members of the COST 2102 International Scientific Committee for their rigorous and invaluable scientific revisions, dedication, and priceless selection process.

# Organization

## International Steering Committee

Anna Esposito	Second University of Naples and IIASS, Italy
Klára Vicsi	Budapest University of Technology and Economics, Hungary
Catherine Pelachaud	CNRS, TELECOM ParisTech, France
Zsófia Ruttkay	Pázmány Péter Catholic University, Hungary
Jurate Puniene	Kaunas University of Technology, Lithuania
Isabel Trancoso	INESC-ID Lisboa, Portugal
Inmaculada Hernaez	Universidad del Pais Vasco, Spain
Jerneja Zganec Gros	Ljubljana, Slovenia
Anna Pribilova	Slovak University of Technology, Slovak Republic
Kristiina Jokinen	University of Helsinki, Finland

## COST 2102 International Scientific Committee

Alberto Abad	INESC-ID Lisboa, Portugal
Samer Al Moubayed	Royal Institute of Technology, Sweden
Uwe Altmann	Friedrich Schiller University Jena, Germany
Sigrún María Ammendrup	School of Computer Science, Iceland
Hicham Atassi	Brno University of Technology, Czech Republic
Nikos Avouris	University of Patras, Greece
Martin Bachwerk	Trinity College Dublin, Ireland
Ivana Baldassarre	Second University of Naples, Italy
Sandra Baldassarri	Zaragoza University, Spain
Ruth Bahr	University of South Florida, USA
Gérard Bailly	GIPSA-lab, Grenoble, France
Marena Balinova	University of Applied Sciences, Austria
Marian Bartlett	University of California, San Diego, USA
Dominik Bauer	RWTH Aachen University, Germany
Sieghard Beller	Universität Freiburg, Germany
Štefan Beďuš	Constantine the Philosopher University, Slovakia
Niels Ole Bernsen	University of Southern Denmark, Denmark
Jonas Beskow	Royal Institute of Technology, Sweden
Peter Birkholz	RWTH Aachen University, Germany
Horst Bishop	Technical University Graz, Austria
Jean-Francois Bonastre	Université d'Avignon, France
Marek Boháè	Technical University of Liberec, Czech Republic
Elif Bozkurt	Koç University, Turkey

Nikolaos Bourbakis	ITRI, Wright State University, USA

## Sponsors

The following organizations sponsored and supported the international conference:

- European COST Action 2102 “Cross-Modal Analysis of Verbal and Nonverbal Communication” ([cost2102.cs.stir.ac.uk](http://cost2102.cs.stir.ac.uk))

ESF Provide the COST Office through and EC contract

COST is supported by the EU RTD Framework programme

COST—the acronym for European Cooperation in Science and Technology—is the oldest and widest European intergovernmental network for cooperation in research. Established by the Ministerial Conference in November 1971, COST is presently used by the scientific communities of 36 European countries to cooperate in common research projects supported by national funds.

The funds provided by COST—less than 1% of the total value of the projects—support the COST cooperation networks (COST Actions) through which, with EUR 30 million per year, more than 30,000 European scientists are involved in research having a total value which exceeds EUR 2 billion per year. This is the financial worth of the European added value which COST achieves.

A “bottom-up approach” (the initiative of launching a COST Action comes from the European scientists themselves), “à la carte participation” (only countries interested in the Action participate), “equality of access” (participation is open also to the scientific communities of countries not belonging to the European Union) and “flexible structure” (easy implementation and light management of the research initiatives) are the main characteristics of COST.

As precursor of advanced multidisciplinary research, COST plays a very important role in the realization of the European Research Area (ERA) anticipating and complementing the activities of the Framework Programmes, constituting a “bridge” toward the scientific communities of emerging countries, increasing the mobility of researchers across Europe and fostering the establishment of “Networks of Excellence” in many key scientific domains such as: biomedicine and molecular biosciences; food and agriculture; forests, their products and services; materials, physical and nanosciences; chemistry and molecular sciences and technologies; earth system science and environmental management; information

and communication technologies; transport and urban development; individuals, societies cultures and health. It covers basic and more applied research and also addresses issues of pre-normative nature or of societal importance. website: <http://www.cost.eu>

- SSPnet: European Network on Social Signal Processing, <http://sspnet.eu/>

The ability to understand and manage the social signals of a person we are communicating with is the core of social intelligence. Social intelligence is a facet of human intelligence that has been argued to be indispensable and perhaps the most important for success in life. Although each one of us understands the importance of social signals in everyday life situations, and in spite of recent advances in machine analysis and synthesis of relevant behavioral cues like blinks, smiles, crossed arms, head nods, laughter, etc., the research efforts in machine analysis and synthesis of human social signals such as empathy, politeness, and (dis)agreement, are few and tentative. The main reasons for this are the absence of a research agenda and the lack of suitable resources for experimentation.

The mission of the SSPNet is to create a sufficient momentum by integrating an existing large amount of knowledge and available resources in social signal processing (SSP) research domains including cognitive modeling, machine understanding, and synthesizing social behavior, and thus:

- Enable the creation of the European and world research agenda in SSP
- Provide efficient and effective access to SSP-relevant tools and data repositories to the research community within and beyond the SSPNet
- Further develop complementary and multidisciplinary expertise necessary for pushing forward the cutting edge of the research in SSP

The collective SSPNet research effort is directed toward integration of existing SSP theories and technologies, and toward identification and exploration of potentials and limitations in SSP. More specifically, the framework of the SSPNet will revolve around two research foci selected for their primacy and significance: human–human interaction (HHI) and human–computer interaction (HCI). A particular scientific challenge that binds the SSPNet partners is the synergetic combination of human–human interaction models, and automated tools for human behavior sensing and synthesis, within socially adept multimodal interfaces.

# Table of Contents

## Multimodal Signals: Analysis, Processing and Computational Issues

Real Time Person Tracking and Behavior Interpretation in Multi Camera Scenarios Applying Homography and Coupled HMMs . . . . .	1
<i>Dejan Arsić and Björn Schuller</i>	
Animated Faces for Robotic Heads: Gaze and Beyond . . . . .	19
<i>Samer Al Moubayed, Jonas Beskow, Jens Edlund, Björn Granström, and David House</i>	
RANSAC-Based Training Data Selection on Spectral Features for Emotion Recognition from Spontaneous Speech . . . . .	36
<i>Elif Bozkurt, Engin Erzin, Çiğdem Eroğlu Erdem, and A. Tanju Erdem</i>	
Establishing Linguistic Conventions in Task-Oriented Primeval Dialogue . . . . .	48
<i>Martin Bachwerk and Carl Vogel</i>	
Switching Between Different Ways to Think: Multiple Approaches to Affective Common Sense Reasoning . . . . .	56
<i>Erik Cambria, Thomas Mazzocco, Amir Hussain, and Tariq Durrani</i>	
Efficient SNR Driven SPLICE Implementation for Robust Speech Recognition . . . . .	70
<i>Stefano Squartini, Emanuele Principi, Simone Cifani, Rudi Rotili, and Francesco Piazza</i>	
Study on Cross-Lingual Adaptation of a Czech LVCSR System towards Slovak . . . . .	81
<i>Petr Cerva, Jan Nouza, and Jan Silovsky</i>	
Audio-Visual Isolated Words Recognition for Voice Dialogue System . . . . .	88
<i>Josef Chaloupka</i>	
Semantic Web Techniques Application for Video Fragment Annotation and Management . . . . .	95
<i>Marco Grassi, Christian Morbidoni, and Michele Nucci</i>	
Imitation of Target Speakers by Different Types of Impersonators . . . . .	104
<i>Wojciech Majewski and Piotr Staroniewicz</i>	
Multimodal Interface Model for Socially Dependent People . . . . .	113
<i>Rytis Maskeliunas and Vytautas Rudzionis</i>	

Score Fusion in Text-Dependent Speaker Recognition Systems . . . . .	120
<i>Jiří Mekyska, Marcos Faundez-Zanuy, Zdeněk Smékal, and Joan Fàbregas</i>	
Developing Multimodal Web Interfaces by Encapsulating Their Content and Functionality within a Multimodal Shell . . . . .	133
<i>Izidor Mlakar and Matej Rojc</i>	
Multimodal Embodied Mimicry in Interaction . . . . .	147
<i>Xiaofan Sun and Anton Nijholt</i>	
Using TTS for Fast Prototyping of Cross-Lingual ASR Applications . . . .	154
<i>Jan Nouza and Marek Boháč</i>	
Towards the Automatic Detection of Involvement in Conversation . . . . .	163
<i>Catharine Oertel, Céline De Looze, Stefan Scherer, Andreas Windmann, Petra Wagner, and Nick Campbell</i>	
Extracting Sentence Elements for the Natural Language Understanding Based on Slovak National Corpus . . . . .	171
<i>Stanislav Ondáš, Jozef Juhár, and Anton Čižmár</i>	
Detection of Similar Advertisements in Media Databases . . . . .	178
<i>Karel Paleček</i>	
Towards ECA's Animation of Expressive Complex Behaviour . . . . .	185
<i>Izidor Mlakar and Matej Rojc</i>	
Recognition of Multiple Language Voice Navigation Queries in Traffic Situations . . . . .	199
<i>Gellért Sárosi, Tamás Mozsolics, Balázs Tarján, András Balog, Péter Mihajlik, and Tibor Fegyó</i>	
Comparison of Segmentation and Clustering Methods for Speaker Diarization of Broadcast Stream Audio . . . . .	214
<i>Jan Prazak and Jan Silovsky</i>	
Influence of Speakers' Emotional States on Voice Recognition Scores . . . .	223
<i>Piotr Staroniewicz</i>	
Automatic Classification of Emotions in Spontaneous Speech . . . . .	229
<i>Dávid Sztahó, Viktor Imre, and Klára Vicsi</i>	
Modification of the Glottal Voice Characteristics Based on Changing the Maximum-Phase Speech Component . . . . .	240
<i>Martin Vondra and Robert Vích</i>	

## Verbal and Nonverbal Social Signals

On Speech and Gestures Synchrony . . . . .	252
<i>Anna Esposito and Antonietta M. Esposito</i>	
Study of the Phenomenon of Phonetic Convergence Thanks to Speech Dominoes . . . . .	273
<i>Amélie Lelong and Gérard Bailly</i>	
Towards the Acquisition of a Sensorimotor Vocal Tract Action Repository within a Neural Model of Speech Processing . . . . .	287
<i>Bernd J. Kröger, Peter Birkholz, Jim Kannampuzha, Emily Kaufmann, and Christiane Neuschaefer-Rube</i>	
Neurophysiological Measurements of Memorization and Pleasantness in Neuromarketing Experiments . . . . .	294
<i>Giovanni Vecchiato and Fabio Babiloni</i>	
Annotating Non-verbal Behaviours in Informal Interactions . . . . .	309
<i>Costanza Navarretta</i>	
The Matrix of Meaning: Re-presenting Meaning in Mind Prolegomena to a Theoretical Model . . . . .	316
<i>Rosa Volpe, Lucile Chanquoy, and Anna Esposito</i>	
Investigation of Movement Synchrony Using Windowed Cross-Lagged Regression . . . . .	335
<i>Uwe Altmann</i>	
Multimodal Multilingual Dictionary of Gestures: DiGest . . . . .	346
<i>Milan Rusko and Štefan Beňuš</i>	
The Partiality in Italian Political Interviews: Stereotype or Reality? . . . .	355
